ZAP and the Software Security Project

What is ZAP?

- The Zed Attack Proxy (ZAP) is a web application scanner

- ZAP is one of the world's most popular free security tools

- Actively maintained by a dedicated team of volunteers

Congratulations

- Congratulations to the ZAP Core Team

- Moving from the OWASP foundation to the Software Security Project, part of The Linux Foundation

- ZAP core team joining the Linux Foundation full-time

- Core development of ZAP moves to the Linux Foundation

Migration

OWASP Global Foundation chair communication:

- Plan with the core team to do this as smoothly and with as little impact on both the users of, and contributors to, ZAP

- "ZAP has been a big part of OWASP for thirteen-odd years and Simon, Ricardo and Rick are honoured and valued members of the OWASP community. That same community helped nurture and grow ZAP to the point it is now, and I hope will continue to support ZAP in the future."
